to Asymmetric Synthesis Asymmetric Induction 26 Asymmetric induction refers to the control of stereoselectivity exerted by an existing chiral centre on the formation of a new chiral centre. This is one property that many strategies in asymmetric synthesis have in common. The aim being to convert enantiomers into diastereomers.

For instance, the development of methods for the asymmetric synthesis of alkylboron compounds wherein boron is attached to a stereogenic carbon is an important objective, given their utility both as end points (e.g., Velcade) (5, 6) and as versatile precursors to a wide range of other valuable families of molecules, including enantioenriched amines and alcohols (1, 7, 8).

A general, modular method for the catalytic asymmetric

Enantioselective synthesis, also called asymmetric synthesis, is a form of chemical synthesis. It is defined by IUPAC as: a chemical reaction (or reaction sequence) in which one or more new elements of chirality are formed in a substrate molecule and which produces the stereoisomeric (enantiomeric or diastereoisomeric) products in unequal amounts .
