

introduction to biological scanning pdf

A scanning electron microscope (SEM) is a type of electron microscope that produces images of a sample by scanning the surface with a focused beam of electrons. The electrons interact with atoms in the sample, producing various signals that contain information about the surface topography and composition of the sample. The electron beam is scanned in a raster scan pattern, and the position of ...

Overview. The fMRI concept builds on the earlier MRI scanning technology and the discovery of properties of oxygen-rich blood. MRI brain scans use a strong, permanent, static magnetic field to align nuclei in the brain region being studied.

Abstract. Thermal analysis comprises a group of techniques in which a physical property of a substance is measured to a controlled temperature program. One of the thermal analysis techniques, Differential Scanning Calorimetry is presented in this review. It is a highly sensitive technique to study the thermotropic properties of many different biological macromolecules and extracts.
