1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal. That is, a weak input signal can be amplified (made stronger) by a transistor. For example, very weak radio signals in the air can be picked up by a wire antenna and processed by transistor amplifiers until they are strong enough to be ...

Early history Electric model cars. The invention of the first model electric vehicle is attributed to various people. In 1828, Ányos Jedlik, a Hungarian who invented an early type of electric motor, created a small model car powered by his new motor. In 1834, Vermont blacksmith Thomas Davenport built a similar contraption which operated on a short, circular, electrified track.
