

irrigated rice production systems pdf

Irrigation is the application of controlled amounts of water to plants at needed intervals. Irrigation helps to grow agricultural crops, maintain landscapes, and revegetate disturbed soils in dry areas and during periods of less than average rainfall. Irrigation also has other uses in crop production, including frost protection, suppressing weed growth in grain fields and preventing soil ...

Irrigation - Wikipedia

India is one of the world's largest producers of rice and brown rice, accounting for 20% of all world rice production. Rice is India's pre-eminent crop, and is the staple food of the people of the eastern and southern parts of the country. Production increased from 53.6 million tons in FY 1980 to 74.6 million tons in year 1990, a 39 percent increase over the decade.

Rice production in India - Wikipedia

Rice-growing environments. Rice grows in a wide range of environments and is productive in many situations where other crops would fail. Most classifications of rice environments are based on altitude (upland vs. lowland) and water source (irrigated or rainfed).

Where is rice grown? - Ricepedia

Production systems. Start of page. Since biophysical crop suitability or agricultural activities in any farm cannot be separated from the production system in question, we consider 4 production systems for each crop:
