

zeolites in industrial separation pdf

Zeolites are microporous, aluminosilicate minerals commonly used as commercial adsorbents and catalysts. The term zeolite was originally coined in 1756 by Swedish mineralogist Axel Fredrik Cronstedt, who observed that rapidly heating the material, believed to have been stilbite, produced large amounts of steam from water that had been adsorbed by the material.

Zeolite - Wikipedia

1. Introduction. Zeolites, glasses, carbons, and oxides are members of a large group of porous materials known as molecular sieves. Among these, zeolites are the most attractive candidates for industrial applications because of their unusual features.

Nanosized and hierarchical zeolites: A short review

Faujasite is a mineral group in the zeolite family of silicate minerals. The group consists of faujasite-Na, faujasite-Mg and faujasite-Ca. They all share the same basic formula: $(\text{Na}_2, \text{Ca}, \text{Mg})_{3.5} [\text{Al}_7 \text{Si}_{17} \text{O}_{48}] \cdot 32(\text{H}_2\text{O})$ by varying the amounts of sodium, magnesium and calcium. It occurs as a rare mineral in several locations worldwide and is also synthesized industrially.

Faujasite - Wikipedia

What is PSA? (Pressure Swing Adsorption) PSA is an economical alternative for on-site production of oxygen or nitrogen (and other gases) for medical and industrial purposes.

OXYGEN ENRICHMENT SYSTEMS Providing PSA Oxygen Systems

This article reviews the progress made in CO₂ separation and capture research and engineering. Various technologies, such as absorption, adsorption, and membrane separation, are thoroughly discussed.

Polymeric gas-separation membranes were commercialized 30 years ago. The interest on these systems is increasing because of the simplicity of concept and low-energy consumption. In the refinery, gas separation is needed in many processes such as natural gas treatment, carbon dioxide capture, hydrogen purification, and hydrocarbons separations.

The rapidly increasing population, depleting water resources, and climate change resulting in prolonged droughts and floods have rendered drinking water a competitive resource in many parts of the world. The development of cost-effective and stable materials and methods for providing the fresh water in adequate amounts is the need of the water industry.

A Review of Removal of Pollutants from Water/Wastewater

* Global warming is defined by the American Heritage Dictionary of Science as "an increase in the average temperature of the Earth's atmosphere," either by "human industry and agriculture" or by natural causes like the Earth has "experienced numerous" times "through its history."
